

Contain-Its

Grout Retention Discs

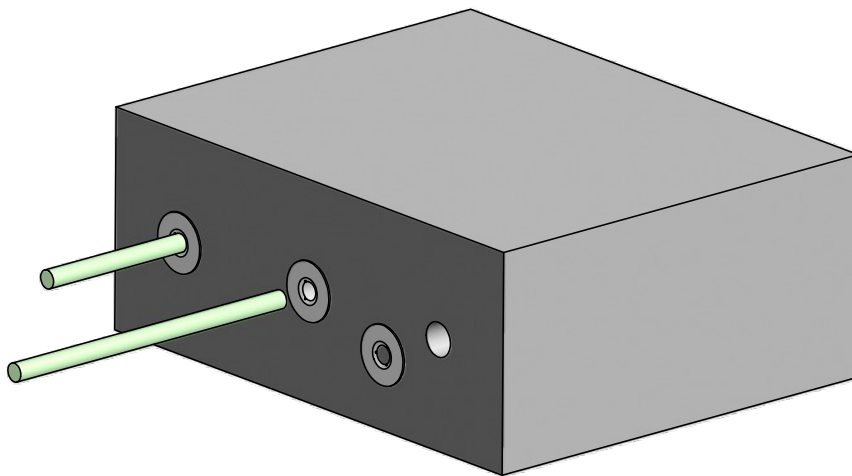

The snug fitting Contain-It is invaluable when when resin runs due to a rise in temperature. It keeps the epoxy in the hole. The Contain-It is translucent so a quick glance is all it takes for the inspector to confirm a full hole. The disc also protects the installer from epoxy that splatters back when entrapped air pockets burst as the bar is being pressed into the hole.

Made in the USA from HDPE plastic, the Contain-It is sold in boxes of 1000 pcs.

Available in bar sizes 1.7", 3, 4, 6, 7, 8, 9, 10, 11, and 12.
